Opening ToThePoint Software Apps for the First Time

If you try to open a TTP Software application by double-clicking on its icon you get this dialogue box: macOS cannot verify that this app is free from malware. Apple does this to prevent you from opening possible malware. <u>TTP Software applications are not malware</u>. Click Cancel to dismiss the dialogue box.

To open a TTP Software application for the first time right-click on the program's icon and choose "Open". Another dialog will appear where you will need to click on a button to confirm you want to open the program. You will only have to do this the first time you launch the application.

Thank you for supporting ToThePoint Software.
